Side effects to watch for are listed below, with what to do.

Medicine	Common effects	What to do
Lithium	Tremor, thirst, passing more urine, weight gain	Check the level; reduce the dose if the level is high
Antidepressants		
Sertraline	Nausea, headache, sleep changes in the first two weeks	Usually settles; keep going unless severe
Clozapine	Constipation, drooling, raised heart rate	Treat constipation early; check bowels every visit

Ask the pharmacist if unsure.
